

Part II

Methods of AI

Chapter 3

Knowledge and Reasoning

Chapter 3 – Knowledge Representation and Reasoning

- 3.1 Summary of Logic and Reasoning
- 3.2 Reasoning: Deduction Systems
- 3.3 Rulebased Reasoning
- 3.4 Knowledge Representation:
General Issues
-  3.5 Knowledge Representation:
Semantic Nets
- 3.6 Knowledge Representation:
Description Logics
- 3.7 Knowledge Representation:
Analogue Representation

3.5 Knowledge Representation

Semantic Networks

Semantic Networks

EINFACHE

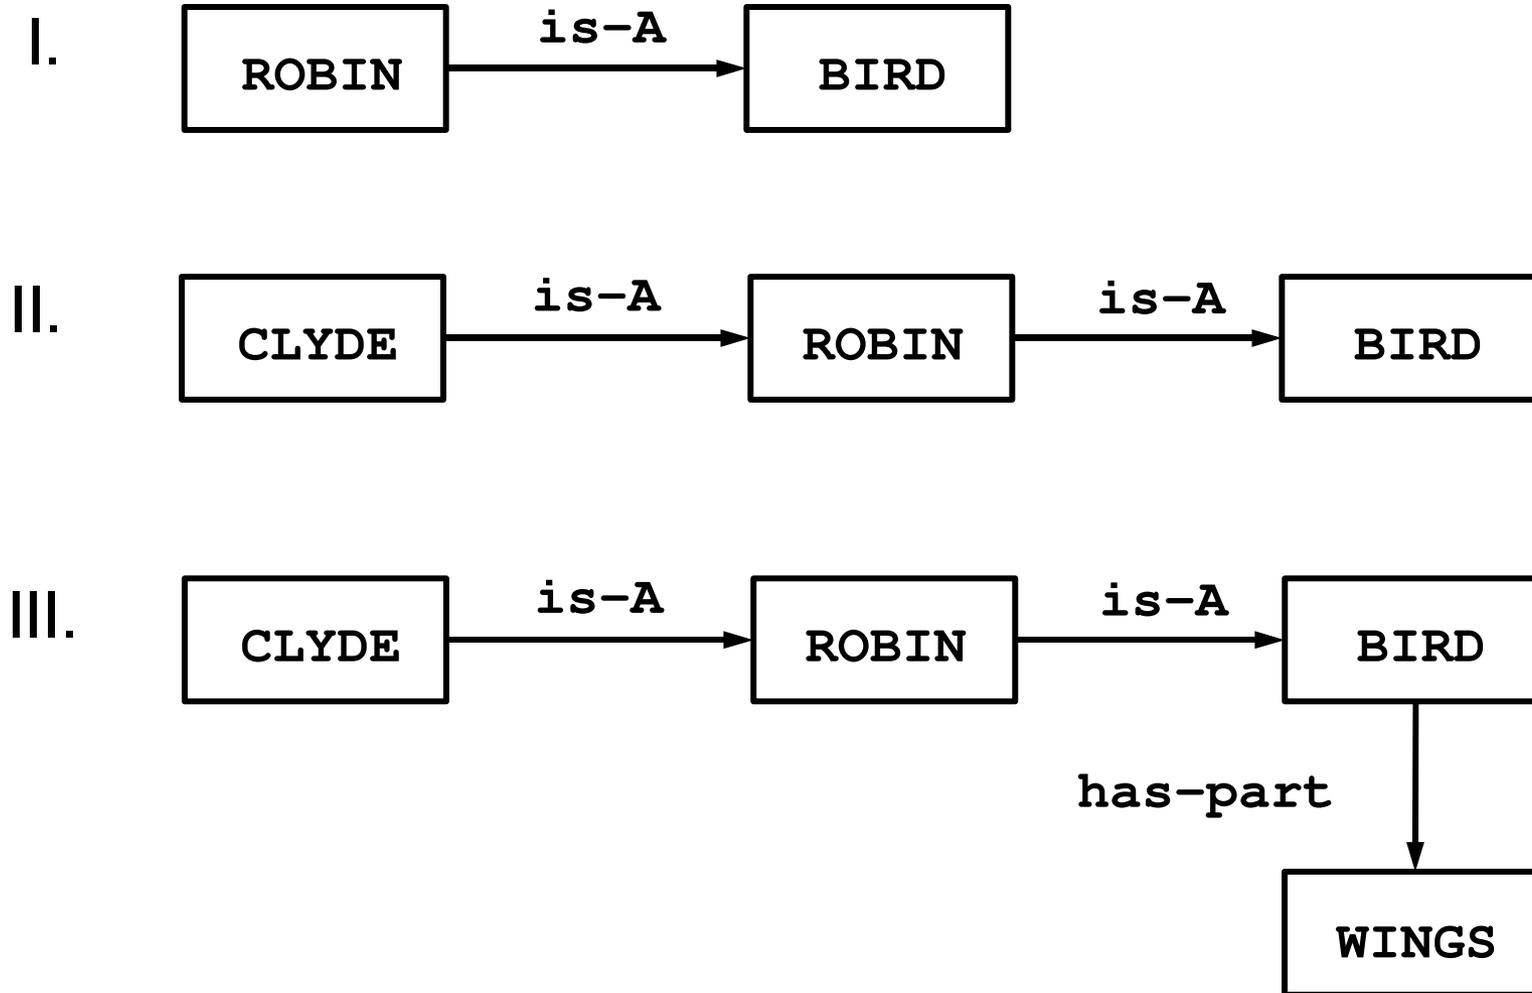

SEMANTISCHE

NETZE

**Simple and
Naive
Semantic
Nets**

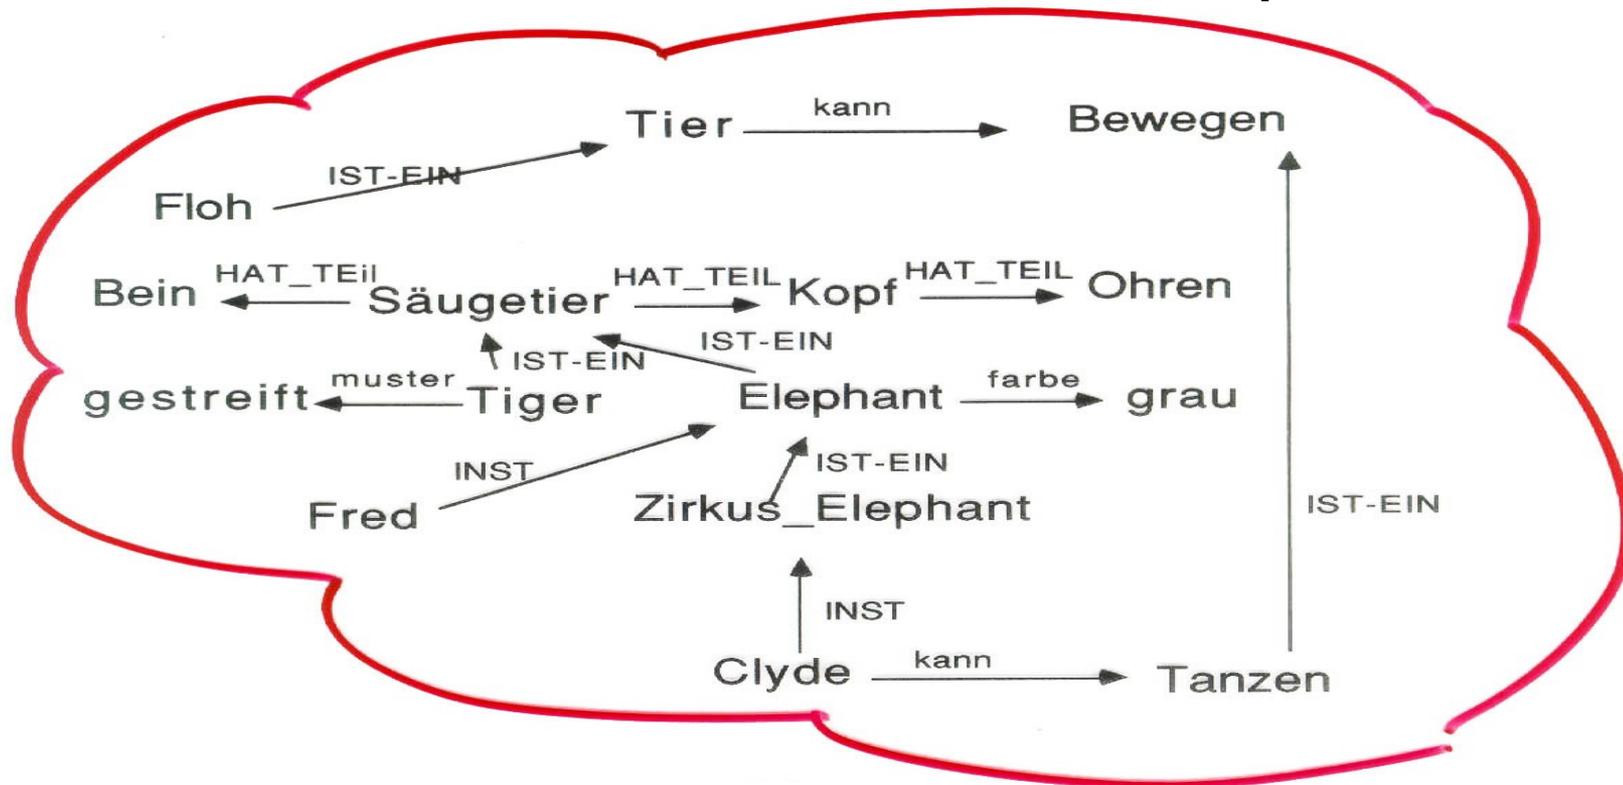

Naive Semantic Networks: to get started!

Semantic Nets:

an „unstructured“ Example

PROBLEM-1: Semantics of the SN?

PROBLEM-2: Structure of the SNs ?

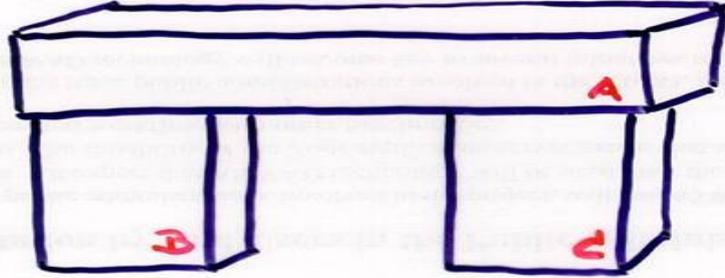

Problem-3: Binary relations?

Another famous Example: Winston's Arch

BEISPIEL:

ARCH

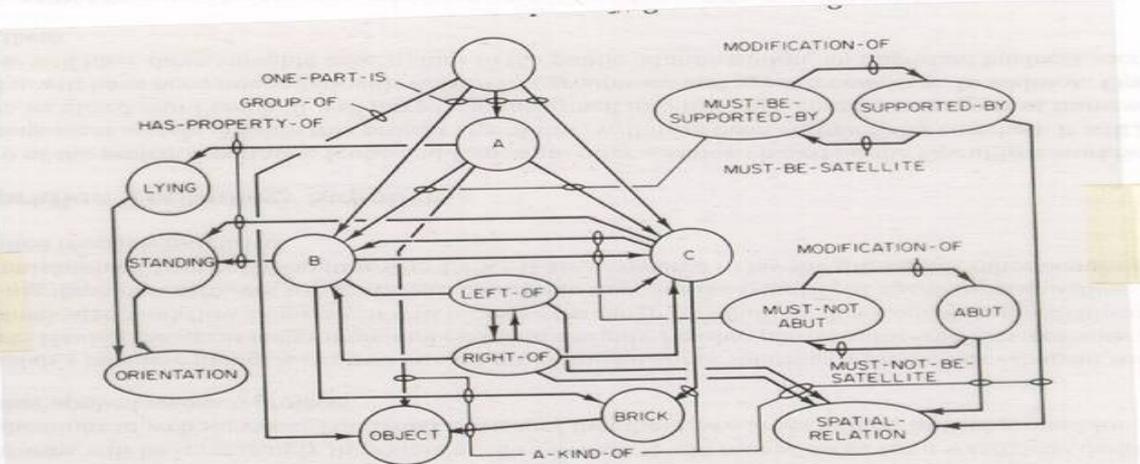

Fig. 5. Structural description of an ARCH. From Winston [1975]. Copyright 1975 by McGraw-Hill, Inc., New York. Used with permission of McGraw-Hill Book Company.

UNIVERSITÄT
DES
SAARLANDES

Binary Relations versus Relations with Many Arguments

 Translation a la Schönfinkel (and other logicians)

TAFEL!

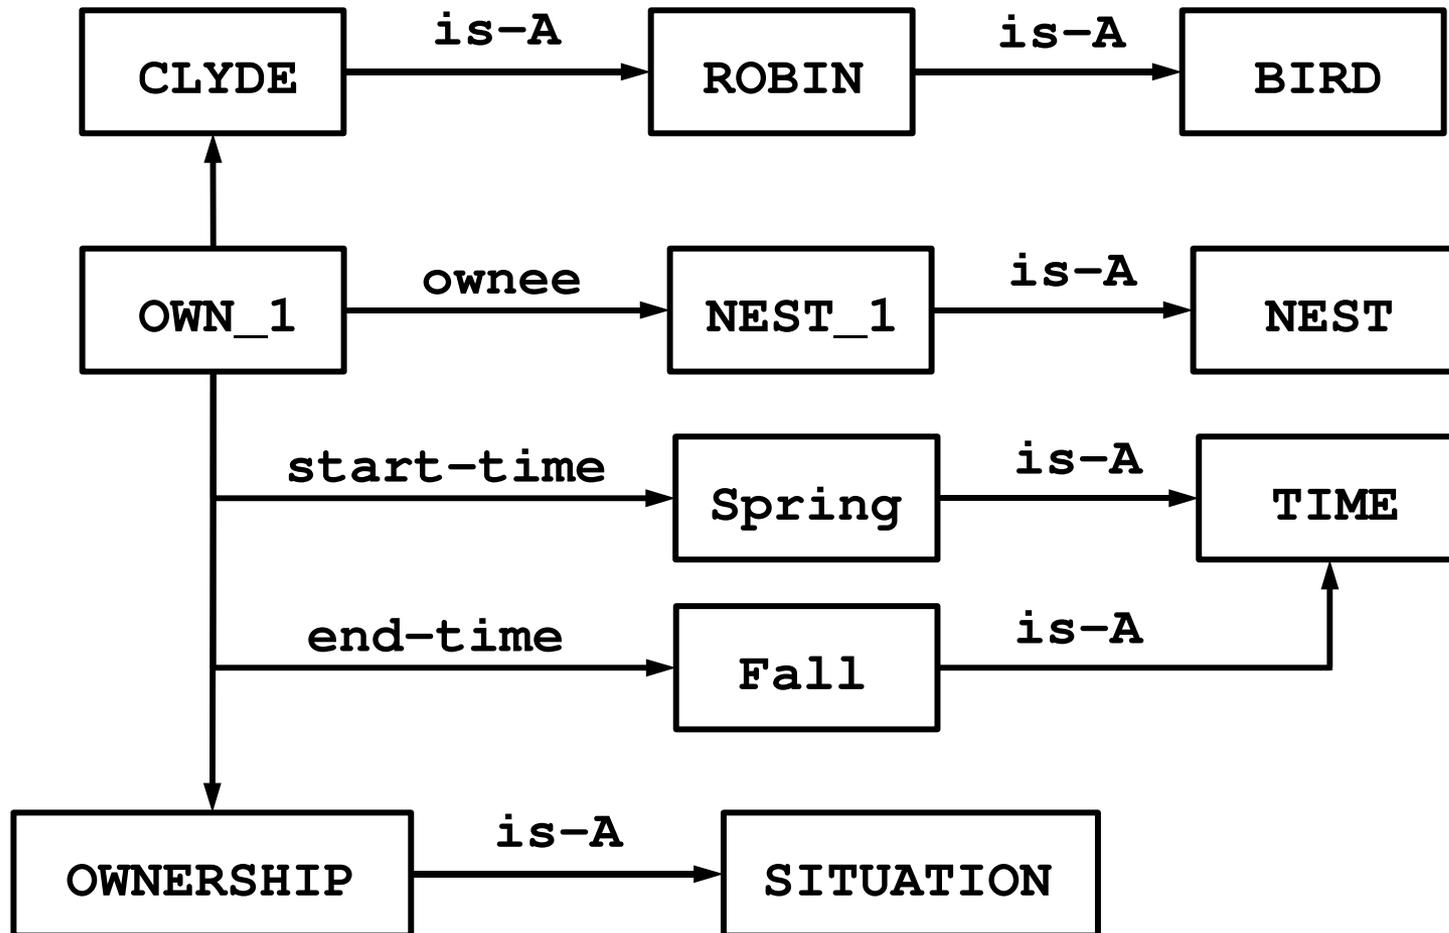

Translates into:

```
Owner (own-1, ... )  
Ownee (own-1, ... )  
Start (own-1, ... )  
End (own-1, ... )
```

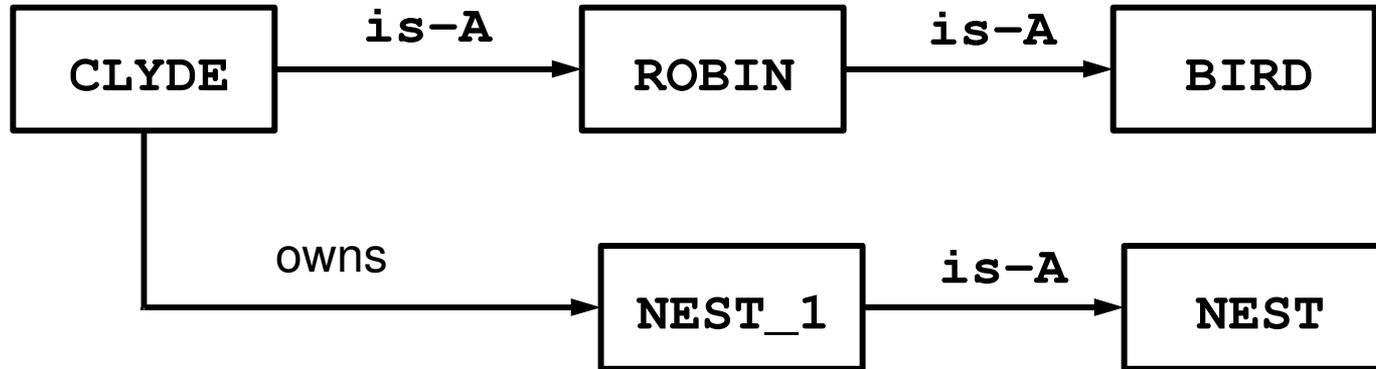

Semantic Networks:

An Example for an n-ary Relation

Token-Type Distinction in SN's

Token: Nest_1
Type: Nest

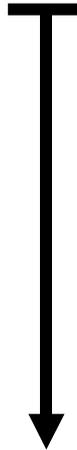

Nest_1 is of type
“Nest”

Semantic Networks: Platon's World

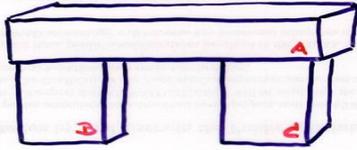

- Generic Concept
- Individual Concept
- Individual Object:

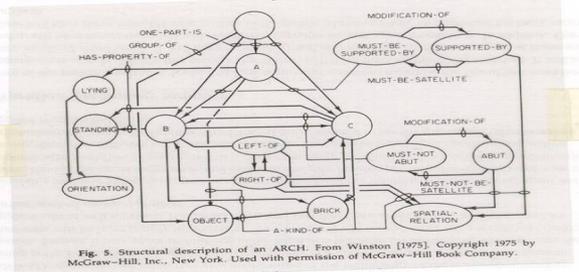

Generic Concept: An Arch

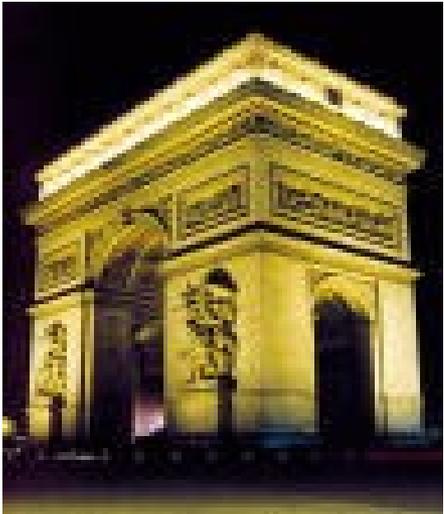

BEISPIEL:

ARCH

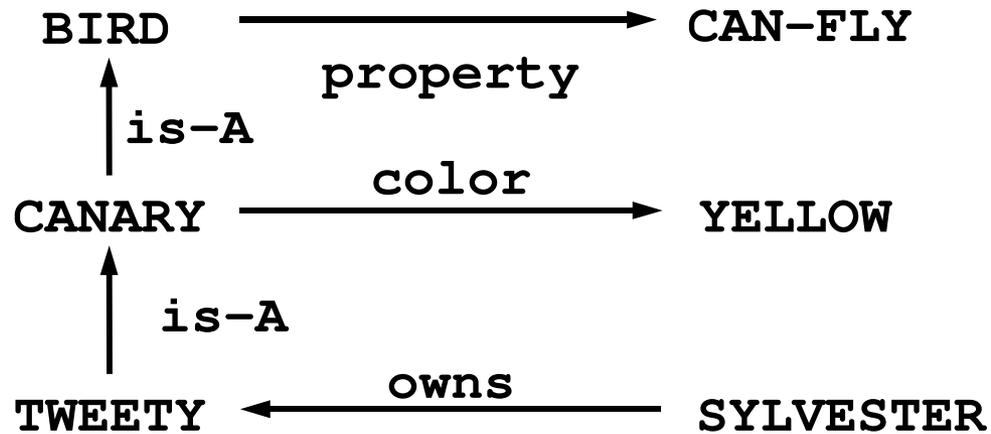

PARIS

An Arc de Triomphe

Inferences with Semantic Nets

⇒ CAN-FLY (CANARY)

⇒ CAN-FLY (TWEETY)

⇒ SYLVESTER owns Something that can fly

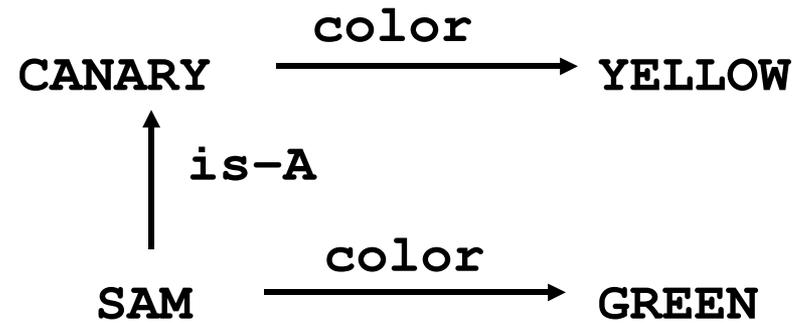

⇒ TWEETY is YELLOW

⇒ SYLVESTER owns a CANARY

⇒ SYLVESTER owns a BIRD

Contradictions in Semantic Nets

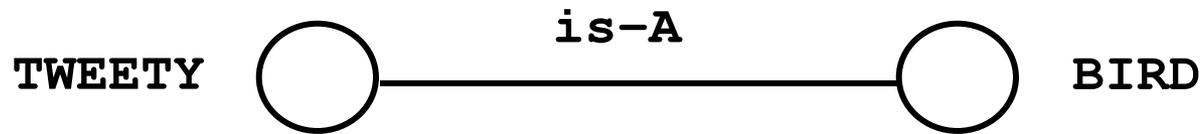

-
-

Just a Graphical Representation of the Predicate Calculus ?

Is-A (TWEETY, BIRD)

Naïve Network Theory: Semantics

LISP

Is-A (ROBIN, BIRD)

(is-A ROBIN BIRD)

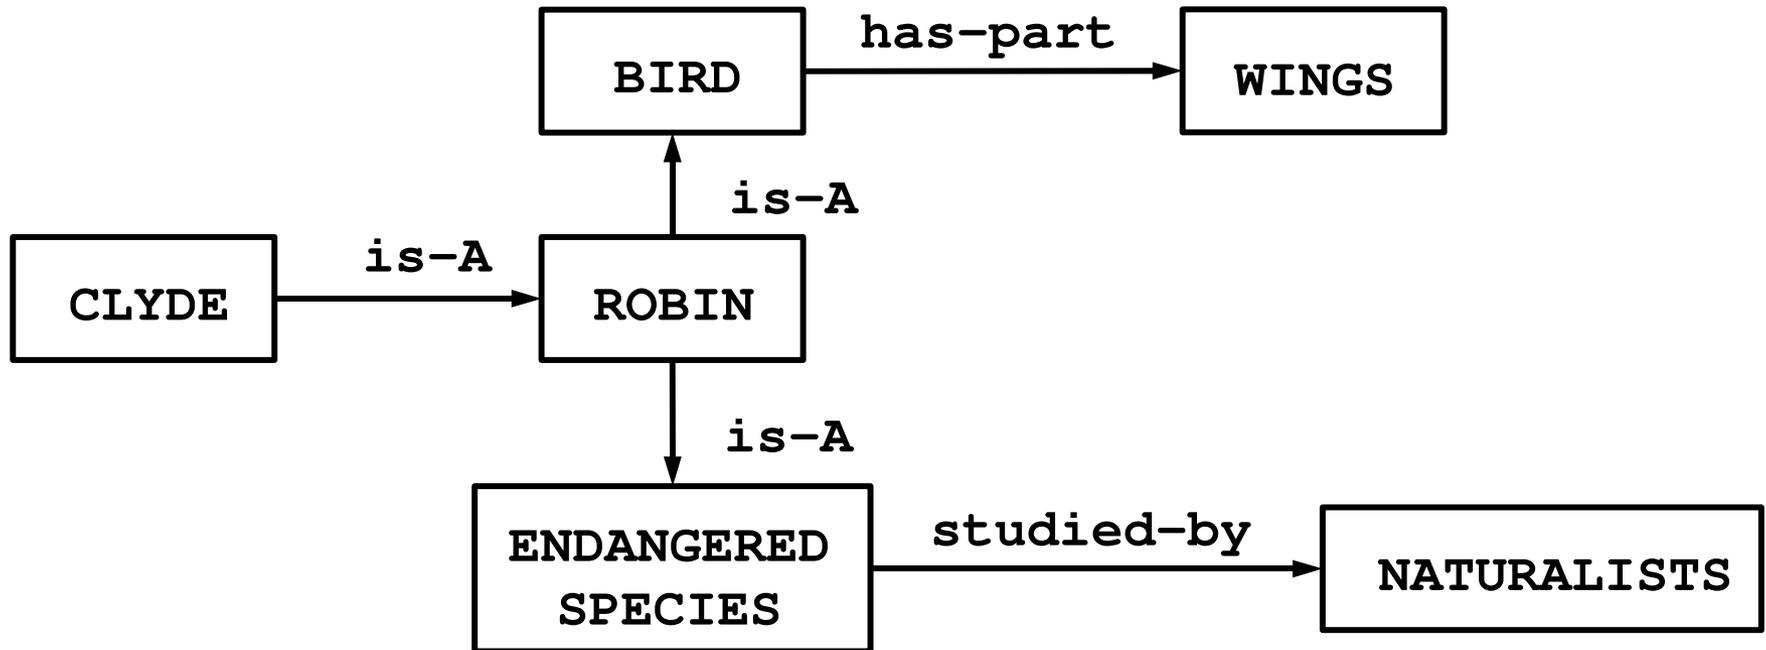

➤ **Pidgin English Semantics?**

Infix: (ROBIN IS-A BIRD)

English: ‚ROBIN is a bird‘

Example: Problems of Semantics

$\text{has-part}(\text{BIRD}, \text{WINGS}) \Rightarrow \text{has-part}(\text{ROBIN}, \text{WINGS})$

$\text{Property}(\text{ENDANGERED SPECIES}) \Rightarrow \text{Property}(\text{CLYDE})$

Do the naturalists study the special bird CLYDE ?

Nice Properties of Semantic Networks

- Inheritance of Attributes
- Propagation of Parts
- Concept Centered Representation
- Semantic Distance
- Procedural Semantics of SN's

**BUT: How to get a Declarative (Tarski) or
Denotational Semantics of SN's?**

Woods (1975): „**What's in a Link**“?

- **Question:** What is the Semantics of Semantic Networks?
 - The Intuition of the Reader?
 - The LISP-Programs operating on the SN?

compare: the early work on the semantics of programming languages

Levesque & Mylopoulos (1977):

- Procedural Semantics

Cercone & Schubert (1979):

- Translation into First Order Predicate Logic

Distinction of Representational and Conceptual Levels in Semantic Networks

Representational Level	Primitives
Implementation	Atoms, Lists Nodes, Pointers
Logical	Statements, Predicates, Logical Operators
Epistemological	Concept Types Inheritance and Structure Relations
Conceptual	Semantic and Conceptual Relations Primitive Objects and Actions
Linguistic	Words and Clauses
